Health Coverage Change Analyzer

Available on both our Cheetah and MediRegs platforms and as a standalone product, the Health Regulatory Change Analyzer can flexibly support increased accuracy and efficiency.

Analyze coverage changes in healthcare with our new point-in-time solution

Healthcare coverage requirements are highly complex and constantly changing. It can be difficult to determine which LCDs, NCDs and Coverage Articles were in place at any particular point in time and to keep on top of these evolving changes. Wolters Kluwer’s new Health Coverage Change Analyzer makes regulatory changes instantly visible: deleted text is redlined, and added text is displayed in green.

The Health Coverage Change Analyzer provides a central location for health law, compliance, and reimbursement professionals to efficiently monitor and understand changes to LCDs, NCDs and Coverage Articles dating back to the inception of ICD-10.

Accelerate healthcare coverage research

- Point-in-time functionality for LCDs, NCDs and Coverage Articles
- Simple to click through, search or use the calendar to navigate changes
- Embed links into customer content or print redlined changes
